MONA MOAZED

PRODUCT DESIGNER

PROFILE

Product Designer with 5+ years of experience designing end-to-end, user-centred products for web and mobile, including four years in New Zealand's automotive industry. I work across research, information architecture, wireframing, prototyping and usability testing, and I care about accessibility. I'm the sole designer behind Auxo Workshop, used by 320+ businesses, including the technician app on iOS and Android, and SmartCheck Pro (e-WOF), a digital Warrant of Fitness app approved by NZTA. I build design systems, use data to improve UX, and use AI tools like Claude and Figma Make to speed up research and prototyping.

Portfolio

Albany, Auckland, New Zealand

SKILLS

UX & Research Methods

User Research (Qualitative & Quantitative), Personas, Journey Mapping, Information Architecture (IA), User Flows, Usability Testing, Interaction Design

Design & Prototyping

Wireframing, Low- to High-Fidelity Prototyping, Design Systems, Mobile Design (iOS & Android), Accessibility & Inclusive Design

AI & Tools

Figma, Figma Make (AI prototyping), UX Pilot, Miro, Claude, Claude Design, GitHub, AI-assisted Design

Data & Optimisation

Microsoft Clarity, Userpilot, Behavioural Analytics, UX Optimisation

EDUCATION

Bachelor of Computer Software Engineering

University of Science and Culture, Tehran, Iran

Feb 2000 – Feb 2004

B.Sc. thesis: Design and Modelling of a Finance Institute

EXPERIENCE

Product Designer — Auxo Software

Auckland, New Zealand | Aug 2022 – Present

Products: Auxo Workshop (Web & Mobile), technician mobile app (iOS & Android), SmartCheck Pro (e-WOF)

Role: Solo Product Designer, supported by a part-time contractor

- Led end-to-end UX design across multiple products, managing the full lifecycle from discovery to delivery as the sole UX designer.
- Designed SmartCheck Pro (e-WOF), a digital Warrant of Fitness inspection app that won NZTA approval to replace pen and paper inspections in certified workshops.
- Designed customisable checksheets for SmartCheck Pro, taking them from research to a working prototype that balances flexibility for businesses with simplicity for field technicians.
- Designed and released the technician app for iOS and Android. All Auxo Workshop customers now use it, and it connects to SmartCheck Pro.
- Found that many technicians struggled with small buttons and colour differences, so I checked touch target sizes and colour vision and changed the design.
- Built an interactive Auxo Workshop game with Claude AI. Customer success, sales and marketing use it for training and at events to show prospects how the product works.
- Started an early-stage concept for a consumer app connecting vehicle owners with workshops.
- Recently began transitioning into a Product Owner role, contributing to backlog prioritisation and writing user stories alongside my design work.
- Improved usability for our growing base of 320+ customers.
- Conducted qualitative and quantitative user research, including stakeholder interviews and behavioural analysis, to inform product strategy and design decisions.
- Created key UX deliverables including personas, journey maps, user flows, and information architecture to support scalable product design.
- Designed low- to high-fidelity wireframes and interactive prototypes in Figma, improving clarity and usability of core workflows.
- Planned and executed usability testing sessions, identifying issues and reducing friction across key user journeys.
- Established and maintained the Auxo Design System, improving consistency and reducing design duplication.
- Analysed user behaviour using Clarity and Userpilot to identify drop-off points and adoption trends, then drove redesigns based on the data.
- Collaborated closely with developers and product teams to ensure design feasibility and smooth implementation of features.
- Make front-end code changes directly in GitHub. I create storyboards in Claude design that developers, including back-end engineers, use to build features across the front end and back end.
- Use AI tools (Claude, Figma Make, UX Pilot, ChatGPT) to speed up ideation, prototyping and research synthesis.

Freelance UX Designer — Auckland, New Zealand

Fresh Market: Online Grocery Platform | Oct 2020 – Apr 2021

- Collaborated with a team of 4 designers to deliver an end-to-end e-commerce experience.
- Conducted 13 user interviews and analysed 85 survey responses to identify key usability issues and user needs.
- Developed personas, journey maps, user flows, and information architecture to guide design decisions.
- Created low- and mid-fidelity prototypes, iterating based on user testing feedback.
- Designed and conducted usability testing that validated user flows and improved task completion rates.

Artesa: Interior Design E-commerce Website

May 2021 – Sep 2021

- Worked in a 2-person UX team designing an e-commerce platform for a US-based business.
- Conducted competitive analysis and card sorting sessions to optimise information architecture.
- Created journey maps and redesigned key interactions, simplifying product browsing and navigation.

- Designed mid-fidelity prototypes tailored to Shopify's platform constraints.
- Ran usability tests to validate navigation and content structure.

Coffee Coin: Loyalty Mobile App

Jun 2021 – Jan 2022

- Conducted user research to support the design of a mobile loyalty application.
- Defined personas and created user flows, storyboards, and prototypes.
- Designed and tested core user journeys, improving usability of key features such as rewards and transactions.

Computer Engineer — National Post Company

Tehran, Iran | Apr 2004 – 2011

- Developed software solutions, performed system analysis, and designed and managed SQL databases for efficient data handling.
- Provided software testing, networking and IT support to keep the company's systems reliable.
